

Functional Design Possibilities

2nd quarter 2019

We all know the long history of masonry dating back centuries. Full sized masonry has a huge range of possibilities in design and installation.

Thin veneer installations have some limitations and even some impossibilities in achieving desired aesthetic , functional and structural requirements that match full sized veneer.

But that doesn't mean that thin veneers installed with the **TABS WALL SYSTEM** can't offer some of the very same things that are available with full sized veneers. In fact, in some cases, thin veneers, because of the weight (7-8 lbs per square foot) , may make desired project design and detailing more achievable, and at lower costs.

TABS Wall Systems welcomes your questions on what can and cannot be accomplished with thin veneers including brick, natural stone and manufactured stone. Give us a call. We'll tell you about these projects and more !
